Senior Software Engineer with 7+ years building production backend systems in Node.js and TypeScript, with hands-on production experience in Go and full-stack delivery across Vue.js and React. Experienced designing microservices, event-driven architectures with resilient delivery guarantees (idempotent processing, dead-letter queues), and clean/hexagonal architecture migrations. Built transactional systems with strict correctness requirements, including JWT-based authentication for 11,500+ enterprise users. Uses AI-orchestrated workflows (Claude Code, Plan-Review-Execute) to maintain testing discipline and code quality while shipping quickly.

Core Competencies

- **Backend & APIs:** Node.js, TypeScript, NestJS, Go (Gin, Gorm), RESTful APIs, GraphQL, Microservices, Event-Driven Architecture
- **Frontend:** Vue.js (2 & 3), React, JavaScript ES6+, HTML5/CSS3
- **Architecture & Design:** Clean/Hexagonal Architecture, Monolith-to-Microservices Migration, Idempotent Processing, Dead-Letter Queue Patterns
- **Databases:** PostgreSQL, MongoDB, MySQL, Redis, Elasticsearch
- **Cloud & DevOps:** AWS (Certified Cloud Practitioner), GCP, Docker, Kubernetes (GKE), GitHub Actions CI/CD
- **Engineering Practices:** Unit & Integration Testing, Code Review, Agile/Scrum, Technical Mentoring
- **AI-Assisted Development:** Claude Code and Cursor — daily use, Plan-Review-Execute orchestration

Professional Experience

- **Relink** **Global, Remote**
Software Engineer *Jan 2025 - Jul 2026*
 - Designed and shipped a passwordless Magic Links authentication system (JWT-based) across distributed Node.js/TypeScript microservices for 11,500+ enterprise users, with strict correctness requirements on session and identity handling
 - Owned a new supervisor-validation user tier end to end: PostgreSQL schema and migrations, Node.js/TypeScript service layer, and Vue 3 frontend; drove adoption by 15 new enterprise accounts and onboarded 2,000+ users
 - Ramped into Go (Gin, Gorm) production work, delivering endpoints and feature/bug work on a Go microservice while respecting its layered architecture
 - Migrated CI/CD pipeline from Cloud Build to GitHub Actions, enabling automated testing and zero-downtime deployments across Node.js and Go services
 - Delivered features across three concurrent client projects, collaborating directly with product and clients on requirements and demos

- **Continuum HQ** **Global, Remote**
Senior Full Stack Developer *Jul 2021 - Dec 2024*
 - Drove backend evolution toward hexagonal/clean architecture, decoupling the business domain from legacy Strapi infrastructure
 - Designed a background processing pipeline on GCP Pub/Sub + Cloud Run, with idempotent handlers and dead-letter queue (DLQ) handling for resilient at-least-once delivery
 - Tech Lead for MatchSkills (Oct 2022 - Feb 2023, 5 months), a sector-specific job-matching platform; led a small team through delivery
 - Integrated multiple inherited Node.js/AWS Lambda healthcare microservices to build a telemedicine appointment calendar (React + Astro frontend), handling cross-service data mapping and error handling across differing schemas
 - Optimized read performance with Redis caching and Elasticsearch; led zero-downtime infrastructure migrations on GKE, and mentored 3+ junior developers through structured code review
- **Aynitech Group** **Remote**
Full Stack Developer *Jan 2020 - Jun 2021*
 - Rearchitected a legacy serverless backend into a domain-driven NestJS architecture with an independent authentication service, eliminating cold-start latency on the critical login path
 - Decomposed a Node.js/NestJS monolith into independently deployed AWS Lambda functions behind API Gateway using the Serverless Framework
 - Built a full-stack eCommerce platform integrating the Stripe payment gateway, handling transactional payment data with strict correctness requirements end to end
- **Prodequa / Freelance** **Lima, Perú**
Full Stack Developer *Jan 2019 - Dec 2019*
 - Delivered 5+ custom web applications and CMS solutions for Peruvian companies, translating Figma designs into responsive, production-ready code

Education

- **Universidad Nacional Mayor de San Marcos (UNMSM)** **Lima, Perú**
Bachelor of Software Engineering *2015-2020*
- **Instituto Politécnico Nacional (IPN)** **Mexico City, Mexico**
Student Exchange, Computer System Engineering *2019*

Languages & Certifications

- Spanish (Native, C2), English (Professional working proficiency, B2+)
- **AWS Certified Cloud Practitioner** (Sep 2023)
